DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed October 6, 2005 have been acknowledged.
2. The objection to the specification is withdrawn due to applicant's submission of a new abstract.
3. The objection to claim 2 is withdrawn due to applicant's argument.

Claim Rejections - 35 USC § 102

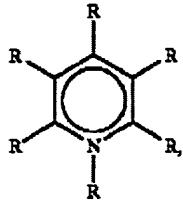

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-4 and 6-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Thoms et al., U.S. Pre Grant Publication 2003/0205696.

Thoms discloses a guest-host system emissive system used in organic light emitting devices. Paragraph 0012 of the reference discloses that the host is a carbazole based compound having a structure

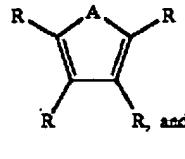

, wherein at least two R are carbazole or substituted carbazole (see paragraph 0061). When there are three R's that are substituted on the 2-, 3- and 6- position, there is no n-fold axis of symmetry. Thoms also discloses that the guest emissive material can be tris(2-phenylpyridine)iridium as per instant claims 1 and 9-11 (see paragraph 0015).

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not provide for the recited electroluminescent element, further including at least z has a chemical structure different from that of another Z.

Response to Arguments

6. Applicant's arguments filed October 6, 2005 have been fully considered but they are not persuasive. Applicant argues that Thom's carbazole based compound in paragraph 0012 is similar to formula 4 on page 23 of applicant's specification is outside of the scope of applicant's present invention. The formula found in paragraph 0061 in the Thom's reference does not have an n-fold axis of symmetry when R is a carbazole residue substituted at the 2, 3 and 6 position (similar to structure 3 found on page 22 of applicant's specification). Additionally, the reference

reads on the instant invention when the host material is , wherein A is S and at least two R's are carbazole or substituted carbazole. When the R's are substituted at the 2-, 3- and 5- position, there is no n-fold axis of symmetry. The rejection is maintained.

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
